MATH TEST 1

TOPIC:

Instructions: Fill out the name and date blanks. Answer all questions to the best of your ability. Then, fill in the topic slot with what you think the topic of this test is.

1) Sally the starfish originally has 5 arms. Every time Shelby the shark eats one of Sally's arms, two more grow back in its place. How many arms will Shelby have eaten when Sally has 100 arms?

_____ arms

2) Amelia buys one bag of goldfish crackers and 2 packs of seaweed at the snack store for \$19. Juliana buys 2 bags of goldfish crackers and one pack of seaweed for \$26, at the same store. Milana wants to buy 1 bag of goldfish and 1 pack of seaweed. How much money will she spend?

_____ dollars

3) In a school of fish, 144 fish are green, 201 are blue, and 56 are under 2 months old. If all fish have to be either green or blue, how many fish over 2 months old are in the school?

_____ fish

4) Marco wants to buy an aquarium. The first aquarium he looks at has dimensions of $20 \times 12 \times 5$. The second aquarium has dimensions of $10 \times 25 \times 4$. What is the difference in the volumes of the two aquariums?

_____ units cubed

5) A scuba diver swims into a cave with octopuses and crabs in it. Each octopus has 8 legs, and each crab has 10 legs. The scuba diver sees 156 legs, 16 animals, along with some *really* pretty seaweed. How many crabs are there in the cave?

_____ crabs

6) In how many different ways can you rearrange the letters in the word "SEAS"?

_____ ways
